

## Engineering Services For Healthcare

Hospitals  
Clinics

Laboratories

MRI Suites

Outpatient

### **H**ealthcare facilities require more care in planning, design, construction and utilization

Today's healthcare providers require more performance from their facilities investments. Increasingly, our healthcare clients are using technology to meet the needs of their patients. Modern diagnostic tools (MRI technology, X-ray, Chromatography, etc.) and computer/network-centric business systems (Records Management, Accounting/Billing and Scheduling) are common place. Today's facilities must be designed to support the operational needs of these technology-dependent services and the needs of the patient.

Our consulting and engineering capabilities add significant value to the performance of our clients' healthcare operations. Through careful collaboration with our clients and their key technology providers, we consistently deliver solutions that support their strategic direction while avoiding "missed opportunities".

As the leading Mechanical and Electrical engineering firm in Florida, we have the privilege of serving the leaders in our market place.
