Consulting and Engineering Services for the Real Estate Market

Real estate investments are major considerations for brokers, developers, and buyers. Careful assessment of building infrastructure, facility support systems and performance capabilities are an essential part of the investment success.

Today, many owners and tenants require 7x24x365 availability of their technology-based business systems. Reliable building infrastructure and high-speed communications access are critical business requirements. The availability and reliability of crucial resources (utility power, emergency power, voice and data, air conditioning, water, security, transportation access, etc.) become key elements of the real estate decision.

Kamm's engineering and technical resources may be applied by brokers and investors to assure that buildings meet the needs of the owner, tenant and end user . . . today and tomorrow

We are the leading consulting and engineering firm in South Florida and enjoy the privilege of working with the business leaders in our marketplace.

Price, quality and delivery; three measures our clients tell us that are critical to their competitiveness. We take pride in our ability to meet their needs.
